

ASSIGNMENT SUBMISSION

Name: Devansh Sahu
Program: B.Tech Computer Science and Engineering (AIML)
Institution: LNCT Group of Colleges
Module: React – Forms Lab

Lab Objectives

- Explain about React forms and define controlled components.
- Explain about various input controls (textbox, textarea, button).
- Explain about handling and submitting forms.
- Implement React forms to raise a complaint and get a reference number.

Prerequisites

- Node.js
- NPM
- Visual Studio Code

Lab Execution Steps

1. Create the React Application

Initialize a new React app named "ticketraisingapp".

Screenshot 1: Terminal Output

MINGW64:/c/Users/devansh/projects

```
devansh@LNCT-Desktop MINGW64 ~/projects
$ npx create-react-app ticketraisingapp
Creating a new React app in C:\Users\devansh\projects\ticketraisingapp.

Installing packages. This might take a couple of minutes...
Success! Created ticketraisingapp at C:\Users\devansh\projects\ticketraisingapp

devansh@LNCT-Desktop MINGW64 ~/projects
$ cd ticketraisingapp
```

2. Create ComplaintRegister Component

Implement a controlled form with a textbox for employee name, a textarea for the complaint, and handle form submission to generate a reference number.

Screenshot 2: VS Code - ComplaintRegister.js

```

import React, { useState } from 'react';

export default function ComplaintRegister() {
  // State hooks for controlled components
  const [empName, setEmpName] = useState('');
  const [complaint, setComplaint] = useState('');

  // Form submission handler
  const handleSubmit = (e) => {
    e.preventDefault();

    // Generate a 6-digit random reference number
    const refNumber = Math.floor(100000 + Math.random() * 900000);

    // Display alert with details
    alert(`Complaint Registered Successfully!

Employee: ${empName}
Reference Number: TICK-${refNumber}`);

    // Reset form
    setEmpName('');
    setComplaint('');
  };

  return (
    <div className="complaint-container">
      <h2>Raise a Complaint</h2>
      <form onSubmit={handleSubmit}>
        <div>
          <label>Employee Name:</label>
          <br />
          <input
            type="text"
            value={empName}
            onChange={(e) => setEmpName(e.target.value)}
            required
            placeholder="Enter your name"
          />
        </div>
        <div style={{marginTop: '15px'}}>
          <label>Complaint Description:</label>
          <br />
          <textarea
            value={complaint}
            onChange={(e) => setComplaint(e.target.value)}
            required
            rows="4"
            placeholder="Describe your issue here..."
          /></textarea>
        </div>
        <div style={{marginTop: '20px'}}>

```

```
        <button type="submit">Submit Complaint</button>
      </div>
    </form>
  </div>
);
}
```

3. Output Expected

Visual representation of the rendered form and the triggered browser alert upon submission.

Screenshot 3: Browser Output - Before & After Submission
